Note You also can use other software to manipulate images on a Mac. The Mac version of GIMP (see Editing Digital Photos) is an excellent tool that is free. Another good utility for Photoshop-like

features is Photoshop Elements, which comes bundled with the core version of Photoshop Elements 8. Before you can edit an image, you need to open it in Photoshop or Photoshop Elements and then put it on the active layer. In Photoshop, this process is known as working on an image. When you're ready to save the image, you need to create a new file and

export the image to the format you want. In this process, you need to make sure you choose a destination that's the right size for your needs. To open an image in Photoshop, choose File→Open. Photoshop opens a file browser window (Figure 1-3) that includes a selection of all your recently opened files. Figure 1-3. The Recent Open dialog box is your

handy file browser. This window includes images that you've open recently (note the "Open [File]" button at the bottom). You can also browse to find a file online using the Where box. If the image you want to open is in one of your recent files or on a web page, select the file from the list. If you see two or more files, click the check box to the left of the file you want to open and then

click Open.

High-stability switchable liquid crystal with a single chiral dopant: self-assembled pi-electron donors in bis-spiro compounds. The liquid crystal (LC) 4-[4-(4-octylphenyl)-4-{4-fluoro-5-[5-(4-decylphenyl)pyridin-2-yl]pyridin-2-yl}piperidin-1-yl]butyl-1,8-di-4-cyanobenzoate (5a) exhibits all-normal twist in the LC phase and

selective pi-electron donor (PED) behavior when the dopant concentration is low, whereas it shows screw pitch and pi-electron acceptor (PA) behavior in the isotropic state at high concentrations. We have synthesized and characterized the LC 5a and its two-dimensional (2D) supramolecular chiral nematic (SN) organization in the LC phase. The morphological analysis of

SN textures shows a multilayer twisted structure with an anisotropic pitch of 5.5 nm. The single-crystal X-ray diffraction studies demonstrate that the 2D chiral organization in the LC phase is due to the formation of a partial pi-electron network in the metastable state, which is responsible for the unusual PED behavior of the LC. Besides, an all-normal twist

mode is also observed in the LC 5a. This is the first example of a single chiral dopant which produces different twist-nematic (TN) textures in the same LC matrix, showing that, in the future, nematic devices based on a single chiral dopant could become a mainstream technology.//

What's New in the Adobe Photoshop 2021 (Version 22.4.2)?

Image copyright Getty Images In the last three years Twitter has come to be almost as important as the media for the news agenda. During the summer of 2016 the BBC and Sky News were locked in a public spat over the use of the phrase "fake news" - Sky's anchor admitted it had not bought any of the "hundreds" of stories that had been

shared as an alternative to their own analysis of the Brexit vote. In the summer of 2017 CNN was forced to apologise for passing a story as a "breaking news alert" that was not true. For all these historic examples the BBC has been the centre of this storm. There have been dozens of other controversies. BBC presenter Gethin Jones triggered a thousand

uprisings by calling in his BBC Radio 5 live show - with no shadow of irony - for the purveyors of fake news to be "hunted down and executed". And then this week arrived an even bigger story for the BBC, as it came to be revealed that the BBC wrongly estimated the cost of the EU referendum to be £9.4m. Spending that large on a media event is unprecedented for the

BBC. This figure is in the right ballpark but the real figure comes from a BBC trust document in 2017 showing a direct spending of almost £4.5m. Image copyright PA Image caption Jeremy Corbyn was unable to take a selfie at the last leaders' debate after being accused of a "fake-news" offence This is the cost of a big newspaper campaign - an estimated £1.5m - and the BBC has now admitted

it's spent much more than that. The equivalent of a media operation at the height of an election must be many times greater. So the question must be: why? What is driving this spend? Is it underpinned by the really big numbers of an election when the next one is due in 2022? Is it a return of the "centre of gravity" of local decision-making, by shifting a lot of resources to a handful of

local areas, as some commentators have suggested? Or is it a personal loyalty to a very junior BBC figure? All three of the last three BBC Director Generals - Tony Hall, George Entwistle and Tony Hall again - have been the targets of allegations of personal impropriety, including sexual impropriety. Jeremy Corbyn's fans - and he has a lot of them -
