By Kimberly K. Arden, FreelanceWriter Thank you for visiting! I've been a long-time photographer who's been in the business for over 25 years, and I'm very proud of the work I've done. With that said, I also realize that no two images are ever alike. And that's why I created this resource, to give you as much help as possible in perfecting the images you take. While I've come across dozens, if not hundreds, of "best" tutorials out there, the only way to truly make your images look like they were actually taken by a professional is to take your time, and truly master the skill. You'll find that it takes a lot of trial and error to get it right. This is not a "how to" guide. And I don't want to turn into just a lot of text. What I will do, is lay out my methods of perfecting each of the 200+ photo effects. To the best of my ability, I'll give examples of things I've tried, and some of the tips I've been given. While I have to assume that you've taken a course, learned some basics, and have some experience with digital photography, I'll still be giving you the information you need to perfect your images, no matter your skill level. Just as many people use Photoshop, Lightroom, or Aperture, I'm going to assume that you use one of these programs. If you haven't got any of these programs, don't worry, because you can learn how to use them to do just about anything you want. Since I want to make it as easy as possible for you, the majority of the effects you'll be using are already included in your image editor. But you may need to use a "layers" feature to put a little more effort into it. It's easy to get stuck in the learning process. Don't be afraid to go back and re-do your effects, or you'll lose all your work, not just the one you're trying to perfect. What's Included In The Package? The package includes all 200+ effects that I've come across over the years. These are organized into groups for your convenience. For example, if you need to go back and edit a particular effect, all you need to do is go to "Effects/Filters/Blur/Gaussian Blur," or something similar. These are things 82157476af
